**DETAILED ACTION*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-6 and 9-12 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-12 of U.S. Patent No. 5077870.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the use of headed stems would have been obvious over the teaching in the patent of mushroom heads.

Claims 7 and 8 rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-12 of U.S. Patent No. 5077870 in view of Kalleberg (US 4290174). Further modification of the teachings of claims 1-12 of U.S. Patent No. 5077870 such that the substrate is polypropylene would have been obvious in view of Kalleberg describing in the example in col. 9 of a polypropylene monofilament extending from a polypropylene layer.

Art Unit: 3677

The following is a quotation of 35 U.S.C. §103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. §103(a) as being unpatentable over Kalleberg (US 4290174) in view of Nealis (US 3270408).

Kalleberg (figures 2, 4) teaches hook strip structure including monofilament stems 13 with mushroom heads consisting of a longitudinally oriented polymeric material and a backing 12. The difference is that the base is not homogeneous and the longitudinally orientation of the polymeric material is not stated as having a birefringence value of at least 0.001. However, Nealis (figures 1-5) teaches that it is desirable to configure the substrate in a homogeneous manner because it is a simpler form which can be easily and inexpensively produced (col. 1, lines 20-22). As it would be beneficial to make the fastener of Kalleberg in a less expensive manner, it would have been obvious to modify the fastener of Kalleberg so that the backing is homogeneous in view of Nealis teaching that it is desirable to do so in order to have a fastener that can be inexpensively produced. As to claim 7, the example described in col. 9 of Kalleberg indicates a polypropylene monofilament extending from a polypropylene layer. In regard to the dimensions and geometries as claimed, these are obvious over the dimensions and geometries of the fasteners of Kalleberg and Nealis. In regard to claim 9, applicant is given Official Notice that the winding of the hook strip in a roll is a common expedient to store a linear member in the same fashion as the well-known roll of adhesive tape.
